

Othman Hassan

Photovoltaic Systems

Business idea:

Its coming close to the end of the nonrenewable energy the world start to think about the renewable energy source although keep in our minds the wars widespread in our time so we need a source of energy that we can found most of the time without any control of humans so it's the sun, my idea to make a sun panel inside a farm to produce electricity to the area around it.

	Attractiveness	
	High Potential	Low Potential
Market	X	
Harvest	X	
Competitive	X	
Management	X	
Fatal Flows		X

Market:

I believe that in terms of Market, it has a high potential because the idea itself still new and there not a lot of companies working on it but on the other hand it has a big efficiency and affect so it's so useful in my opinion for the market.

Harvest:

For Harvest, it has a high potential because there are multiple ways to gain profit from this business although, if you choose a good place with huge open area that have a big support from sun light and high density of the sun, it can offer big supply for the project which means more profit for the company.

Competitively:

Competitively, there is high potential because there is not a lot of company working in it and having the perfect area for it so its low competitively.

Management:

From the management perspective, I think that it not that hard to management and doesn't need that hard work only good plan with a good management will be fair enough.

Fatal flows:

Moreover, I do believe there could be any fatal flows since there are a lot of climate change that can affect the sun waves reaching to the panels, so it will affect the producing of electric energy in that time, but we store energy in the days we have extra flow of energy, so we use it in these days.
